---

Good morning Dr. Reible,

I am the EPA Remedial Project Manager for the San Jacinto River Waste Pits Superfund site. Several years ago your passive samplers were used at the San Jacinto site to check for dioxin migration through the armor cap over the waste pits. Now we are planning another round of passive sampling (including the cap, surrounding sediment, and surface water) and will use the EPA dive team to place and retrieve the samplers. Would it be possible for you to send to me several of the sampler bodies for the dive team to check on placement procedures? This would be very helpful as we develop the sampling plans.

Please let me know if you have any questions on this, and thanks for your help.

Regards,

Gary Miller
